ROA$_{it}$ is return on accounting; RET$_{it}$ is return on stock market. We used Du's method to adjust the stock performance because of the unstable stock market in the sample period:

$$RET_{it} = \prod_{j=1}^{j=12}(1+r_{ij}) - \prod_{j=1}^{j=12}(1+R_j)$$

where r_{ij} is the monthly stock return rate of company i in month j considering reinvestment of cash bonus calculated by
